Education

The University of British Columbia Vancouver, BC

Bachelor of Commerce, Combined Major in Business and Computer Science *Expected Graduation: December 2027*

- **Coursework:** Machine Learning; Operating Systems; Computer Networking; Computer Vision; Databases
- **Undergraduate Teaching Assistant:** CPSC 310 – Introduction to Software Engineering

Experience

SAP January 2026 – August 2026

Cloud Security Engineer Intern *Vancouver, BC*

- Accelerated security scanning for 200+ services by reducing execution time from 58 to 6 hours through a distributed Celery/Redis task queue and shared bare-mirror Git caching.
- Improved threat visibility across 50+ services by engineering a security monitoring system processing 1M+ daily events with auditing, activity logging, and analysis workflows.
- Strengthened system reliability under high load by designing concurrency and stress tests to validate bulkhead isolation and rate-limiting strategies.

Optum May 2025 – December 2025

DevOps Engineer Intern *Richmond, BC*

- Automated migration of 5TB+ of artifacts to JFrog Artifactory using Bash and PowerShell, eliminating 20 hours per week of manual work and reducing deployment time from 4 hours to 30 minutes across 200+ teams.
- Modernized infrastructure workflows by migrating JSON-based Packer templates to HCL, enabling modular, reusable, and maintainable cloud infrastructure configurations.
- Built a GCP proof of concept for automated virtual machine provisioning and ephemeral compute workflows.

Technical Projects

Prediction Market Arbitrage Engine | *C++, Boost.Asio/Beast, OpenSSL, CMake*

- Built a real-time C++ arbitrage engine ingesting live order-book data from 500+ active prediction markets over persistent WebSocket connections and processing streaming market updates.
- Maintained in-memory bid/ask state for 1,000+ assets with parallel initialization across 16 workers, continuously applying price updates for low-latency opportunity detection without database queries in the hot path.
- Simulated arbitrage execution across multiple order-book levels, accounting for liquidity, partial fills, fees, and slippage to rank opportunities by net profit, return on capital, and executable quantity.

InsightUBC | *TypeScript, JavaScript, Node.js, Express, HTML/CSS, Git*

- Engineered a full-stack UBC course analytics platform using Express REST APIs and TypeScript, with advanced search, autocomplete, pagination, and automated API testing.
- Built a query engine supporting complex filtering, sorting, grouping, and aggregation operations across 60,000+ course sections with logical, numeric, and string-based comparisons.
- Developed Course Pulse analytics with interactive visualizations for grade trends, instructor insights, and department benchmarks.

FoodHub | *PHP, HTML, Tailwind CSS, MAMP, PostgreSQL, Git*

- Developed a full-stack food discovery platform featuring responsive Tailwind CSS interfaces, PHP backend workflows, and PostgreSQL database integration.
- Built secure user workflows with PHP POST requests and session management, designing a normalized PostgreSQL schema in Boyce-Codd normal form for consistent data management.
- Implemented preference-based analytics to track user interactions, identify dining trends, and generate personalized food discovery insights.

Technical Skills

Languages: C, C++, Python, JavaScript, TypeScript, Java
Frameworks/Libraries: React.js, Node.js, Express, Boost.Asio/Beast, Celery, JUnit, Tailwind CSS
Cloud/DevOps: GCP, Docker, Jenkins, GitHub Actions, Artifactory, Packer, CMake, Git
Security: OpenSSL, Black Duck, Checkmarx, GitHub Advanced Security
Databases: PostgreSQL, Redis
